YR2112/YR2116

Remote Control Specification

Product specification

Model	YR2112/YR2116
Transmission power	≤10dBm
Transmission frequency	433.92MHz±75KHz
Modulation mode	OOK/ASK
Battery	CR2450×1PC(3.3V)
Remote channel	2channels/7channels

* YR2112 has 2 LED indicators, YR2116 has 6 LED indicators

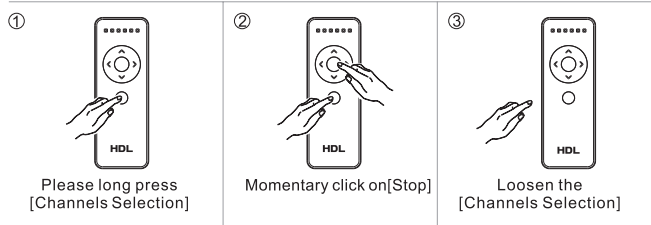

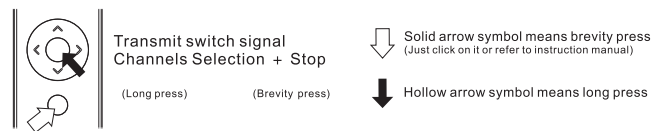

(Take YR2116 as an example) (Back face)

Functions of buttons

- [Up] [Stop] [Down] respectively transmit the position up, stop & down signals under the channel was selected.
- [Channel Selection] is used for remote control channels circularly.

- [Function1] & [Function 2] are used as intermediate stop functions for opening and closing curtains, applicable for Venetian blind, roller blind be provided with tilting function. Other system with relevant function. Please refer to 《product instruction manual》 for more details.

Combination functions

Combination buttons will transmit function signals as below:

★ Attention

- Combine buttons is effective only with receiver of correspond functions.
- Make use of the combine buttons function should be selected the current channel transmit.
- The setting and methods will be a little different if combined to use with different receivers for details please refer to instructions manual.

Channels selection+stop		Channels setting+stop	
	Transmit signal to change direction		Transmit signal to delete limit
Channels selection+up		Channels setting+down	
	Transmit setting to set upper position		Transmit signal to set lower position
Channel setting+function button1		Channel setting+function button2	
	Transmit signal to set position1		Transmit signal to set intermediate position2 for setting
	Transmit signal to use touch control		Transmit signal to cancel touch control
Channels selection+channel setting			
	Transmit signal to switch external modes		

Remote control setting

Basic remote control setting

- Before using the remote control function, the user must perform "Set remote channel" operation, in order to store the remote control channel into the controller. as soon as the motor receives remote control signal, it will act in response as setting.
- If you need to make remote control channel invalid, you can perform the "Delete remote channel" operation.
- When the rotating direction of motor is not same as the desired direction, you can do "Change the direction" operation for correcting it only by working with the transmitter.

★YR2112 attention :

- It changes to the third channel when both LED light turn on at the same time.
- When selecting the third channel, the remote could control the motor which is programmed by the first and second channel for (open), (close), (up tilting), (down tilting) operation, useless for other settings.

Matching with drapery motors system setting and usage information and procedures.
